

1. What is PandaLime? (In Simple Words)

PandaLime (pandalime.com) is a free web platform built to solve a major challenge in modern job applications: **Applicant Tracking Systems (ATS)**. Over 90% of mid-to-large companies use automated software to filter resumes before human recruiters read them. PandaLime acts as an intelligent career companion that (1) scores and fixes resumes against real job postings in 3 seconds, and (2) instantly creates a live, shareable personal portfolio website for the candidate.

100% Free & Open Access No paywalls, subscriptions, or forced signup.	3-Second AI Resume Scan Instant score, missing skills & bullet rewrites.	1-Click AI Portfolio Builder Live personal developer site at /p/yourname.
---	--	---

2. How Resume Scanning Works (Step-by-Step)

1. Upload & Extract: User uploads resume PDF and pastes a job description. Plain text is safely extracted.	2. Binary File Check: Server verifies %PDF- magic bytes to block malicious payloads and ensure safety.
3. AI Comparison: Google Gemini AI checks skills, tools, and experience against the job requirements.	4. Instant Report: Returns an ATS Score (0–100) , missing keywords, and Google X-Y-Z rewritten bullets.

3. AI Portfolio Builder Feature (Live Personal Website)

The built-in **AI Portfolio Builder** turns resume details into a clean, modern personal website in 1 click. Each user gets a live shareable URL (e.g., pandalime.com/p/username) with interactive project showcases, live demo links, tech skill badges, work timeline, social links, downloadable resume, and instant theme switching (Terminal, Modern, Dark). All portfolios and profile data are stored in serverless **Neon PostgreSQL DB** for instant global loading.

4. Technologies Used Across the Platform

Layer	Technology	What It Does (In Simple Words)
Frontend (UI)	React 18 + Vite + Tailwind	Ultra-fast, responsive user interface hosted on Render for smooth mobile/desktop use.
Backend Server	Node.js + Express (Render)	Handles file uploads, validates PDF magic bytes, coordinates AI, and serves REST APIs.
Database	Neon DB (PostgreSQL)	Serverless PostgreSQL storing user accounts, saved scan reports, and live portfolios.
AI Engine	Google Gemini AI	Reads resumes like a senior recruiter, finding skill gaps and rewriting bullet points.
Hosting & Cloud	Render Cloud Platform	Hosts frontend web apps and backend services with global SSL and automatic deploys.
Speed & Security	SSG + HMAC CAPTCHA	235+ pre-rendered static pages + rate limiters to block bots and load in milliseconds.

5. Additional Free Tools & Summary

• STAR Bullet Generator: Converts tasks into quantified achievements. • 250+ ATS Action Verbs: Categorized power words for tech & leadership.	• Job Keyword Extractor: Isolates required hard skills from job postings. • 6 Regional Portals: Localized in Hindi, Tamil, Telugu, Kannada, Marathi, Bengali.
