

PandaLime Career & Portfolio Platform

Project Abstract, Resume Scanner, Portfolio Builder & System Architecture

PROJECT ABSTRACT
Platform URL: pandalime.com
Host: Render • DB: Neon PostgreSQL
Updated: September 2026

1. Executive Summary (What is PandaLime?)

PandaLime (pandalime.com) is a free, modern career platform designed to help job seekers bypass automated hiring barriers (known as **Applicant Tracking Systems** or **ATS**) and showcase their talent directly to employers. Over 90% of mid-to-large companies use software (like Workday, Taleo, and Greenhouse) to filter resumes before human recruiters read them. Resumes missing critical keywords or formatted incorrectly are discarded automatically.

PandaLime solves this with a dual-engine platform: (1) an **AI Resume Scanner** that analyzes and fixes resumes against specific job descriptions in 3 seconds, and (2) an **AI Portfolio Builder** that instantly turns resume details into a sleek, published personal developer website.

100% Free & No Sign-Up	Instant 3-Sec AI Scanner	1-Click AI Portfolio Site
No paywalls or credit cards. Anyone can run full resume scans and generate portfolio previews without mandatory signup.	Powered by Google Gemini AI to analyze full resumes and job descriptions in 3 to 5 seconds with precise keyword scoring.	Converts resume data into a live personal portfolio website at pandalime.com/p/yourname , ready to share with recruiters.

2. How the Resume Scanner Works (Step-by-Step)

Step 1: Upload & Text Extraction	The user uploads their resume as a PDF and pastes a target job description. The server parses the file and extracts clean text while removing unreadable layout quirks.
Step 2: Binary Safety Verification	The backend inspects the binary header (%PDF- magic bytes) to ensure the uploaded file is genuinely a safe PDF, protecting against malicious payloads.
Step 3: Google Gemini AI Analysis	Gemini AI compares the resume text against the job requirements, checking for vital hard skills, frameworks, tools, methodologies, and quantified results.
Step 4: Interactive Score & Action Plan	In seconds, the user gets: an ATS Match Score (0–100) , exact missing keywords to add, rewritten Google X-Y-Z bullet points (<i>'Accomplished [X] by doing [Z], resulting in [Y]'</i>), and formatting alerts.

3. AI Portfolio Builder (Personal Website in 1-Click)

PandaLime includes a built-in **AI Portfolio Builder** that automatically transforms a candidate's resume or profile into a professional, fully interactive personal website hosted live on the platform:

Live Custom URL Each published portfolio gets a clean custom link (e.g., pandalime.com/p/alex-secops) to share on LinkedIn, GitHub, and email signatures.	Recruiter-Ready Sections Includes interactive project showcases with live demo links, technical skill badges, work experience timelines, and 1-click resume download.
Modern Themes & Layouts Instant switching between themes (Terminal Dev, Modern Minimal, Sleek Dark, Engineering) with responsive mobile & desktop support.	Database Backed (Neon DB) User profiles and published portfolios are securely stored in serverless PostgreSQL (Neon DB) for instant global loading and editing.

4. Technology Stack & Infrastructure Architecture

PandaLime is built using modern cloud technologies designed for high performance, serverless scaling, and bulletproof security:

Component / Layer	Technologies Used	Practical Role & Purpose (Simple Words)
Frontend (UI)	React 18 + Vite Tailwind CSS, Lucide Icons	Renders an ultra-fast, snappy interface that loads in milliseconds on mobile phones, tablets, and desktop computers.
Backend Server	Node.js & Express Multer, PDF-Parse, JWT	Handles resume file uploads, checks PDF magic bytes, coordinates AI analysis, and exposes secure REST APIs.
Database	Neon DB (PostgreSQL) Serverless PostgreSQL	Stores user profiles, saved resume scan reports, published portfolios (/p/:slug), and community roast comments with instant serverless scaling.
Artificial Intelligence	Google Gemini AI @google/genai (1.5 Flash)	Acts as the intelligent recruiter engine: evaluates resume content against job postings, identifies keyword gaps, and rewrites bullet points.
Cloud Hosting	Render Cloud Platform Web Services & API Hosting	Hosts both the Frontend client and Node.js Backend API on Render with automatic deployments, continuous health checks, and global SSL.
Speed & SEO (SSG)	Static Pre-Rendering Node scripts + Sitemap	Pre-renders 235+ static HTML pages (including 12 career blog guides and 6 regional language hubs) for instant load times and top SEO ranking.
Security & Anti-Abuse	HMAC CAPTCHA & Limits Rate Limiters, Input Sanitizer	Stops spam bots with mathematical proof-of-human challenges, multi-tier sliding-window IP limits, and strict XSS URL sanitizers.

5. Additional Free Career Tools & Features

STAR Bullet Point Generator Walks users through Situation, Task, Action, and Result to turn routine duties into impressive, quantified achievement bullets.	250+ ATS Action Verbs Library Comprehensive power word library categorized by Engineering, Leadership, Analysis, Scale, and Cost Efficiency.
Job Keyword Extractor Instant NLP keyword extractor that isolates required hard skills and certifications from any pasted job posting.	6 Indian Regional Language Portals Dedicated localized interfaces in Hindi, Tamil, Telugu, Kannada, Marathi, and Bengali to democratize career tools.

6. Project Mission & Summary

PandaLime brings together Google Gemini AI intelligence, high-speed React web architecture, and serverless Neon PostgreSQL storage on Render to provide job seekers with an all-in-one, zero-cost career companion. It removes the guesswork from resume screening and gives every candidate the competitive edge they need to land their dream job.
